

## REMASTER PRO: 4K BREAKTHROUGH MULTIFUNCTIONAL WIFI TELESCOPE

### View and Shooting at the Same Time

Remaster Pro is more than just a telescope; it also helps you document your life! ***This is*** Remaster's ***greatest advantage!***

With Remaster, you can capture moments as you observe, ensuring you don't miss any of the beautiful scenery you encounter!

### Photo & Video - Easy Switch

The remaster's shooting function is both simple and user-friendly. It features dedicated buttons for taking photos and recording videos, eliminating the need to memorize complex switching procedures. Moreover, these buttons are conveniently located near your thumb and designed with ergonomic considerations.

### **Multiple Resolutions Available**

Are you troubled by the format and size of your images? Remaster has the perfect solution for you!

Remaster offers three quality options for your pictures: 4K, QHD (2K), and FHD (1080P). You can freely choose the quality based on your needs!

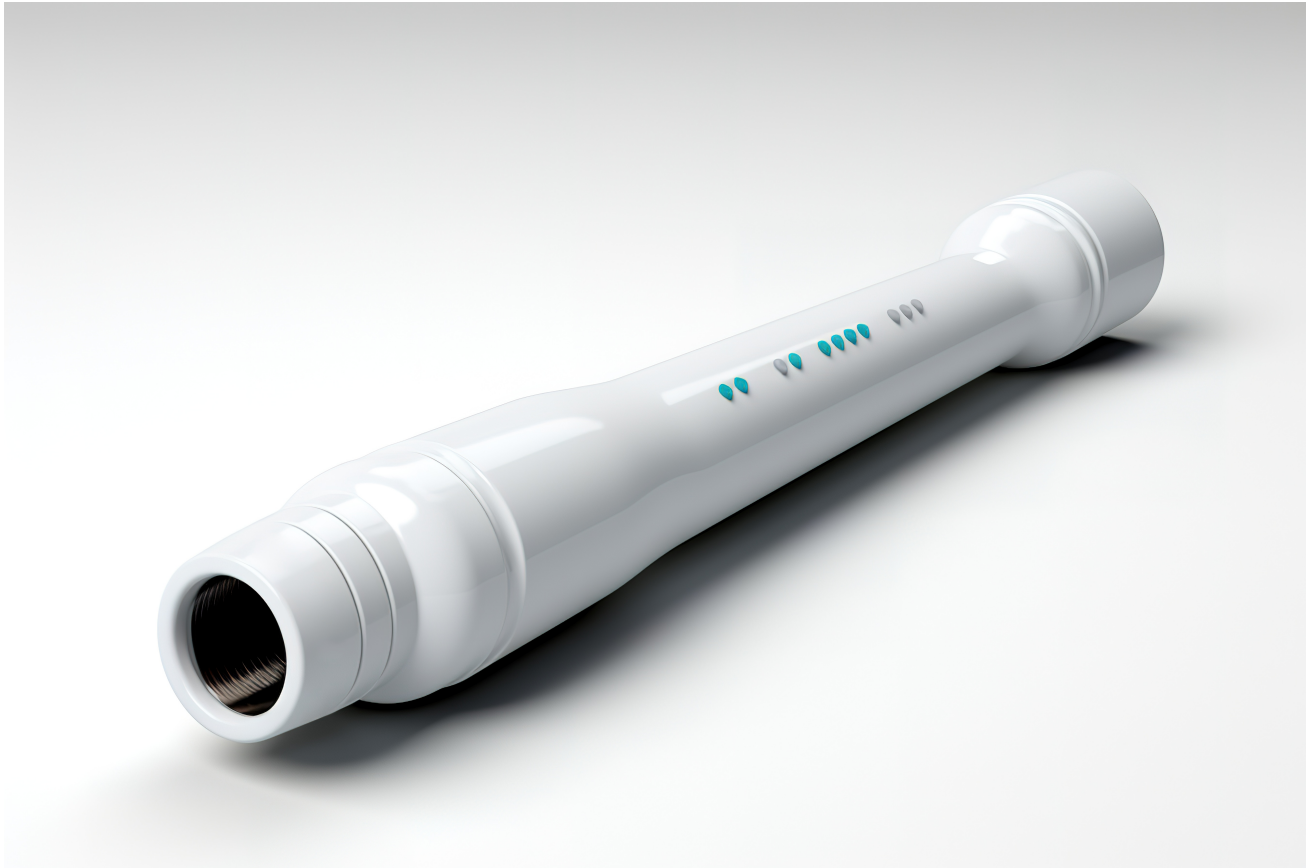

### **Slow Motion & Time Lapse**

Despite being a telescope, Remaster boasts powerful shooting capabilities. It features slow-motion and time-lapse shooting functions, perfectly catering to your daily photography needs. With Remaster, you essentially have your own exclusive panoramic recording assistant!

We offer **3 focusing modes** to meet specific needs in different application scenarios:

- 1. Single Focus(SF)** : Designed for observing objects and scenes at a distance of 30 meters or more. It enables rapid focusing without losing clarity, making it suitable for capturing fast-moving subjects such as birds, planes, sports events, artistic performances, and more.
- 2. Auto Focus (AF)** : Ideal for everyday life photography, this mode automatically focuses within the 0.5m to infinity range, providing versatility for a wide range of applications.
- 3. Manual Focus(MF)** : While the above two modes focus on the entire scene, MF allows for manual fine-tuning, emphasizing the characteristics and details of static subjects. This mode is useful for achieving sharper images and highlighting more details of subjects such as animals in the forest, the moon and clouds in the sky, water birds on the water, marine life, and more. The remaster is equipped with a 1.04" OLED screen and a unique micro eyepiece. The circular display is more in line with the visual perception of the eyes, making it especially suitable for your close-range observations. Our portable telescope boasts an extensive diopter range from -600° to +600°, making it an ideal choice for various visual conditions. **Whether you are nearsighted or farsighted, this telescope can meet your needs**, providing a clear and comfortable observational experience.

For greater convenience, Remaster employs a high-capacity **rechargeable** battery. No need to replace batteries when depleted—simply recharge. With a **continuous shooting duration of up to 5 hours**, its compact body packs a powerful punch.
